

TS HORSE GRASS BLEND

ABOUT

Keep the herd in top physical shape with our endophyte free mix. With five diverse grasses GL Horse Pasture Mix provides a prolonged green pasture. Management for grazing height, fertility and stocking rates will improve quality and reduce purchased feed cost.

SUGGESTED MANAGEMENT

Plant in early Fall or Spring using a Brillion seeder or drilled at a depth of .25 in. A well prepared seed bed will benefit establishment. This can be broadcast and rolled firmly with a cultipacker. If you plan to broadcast it is suggested to increase your seeding rate by 1.5 times. Do not graze until firmly rooted. Manure or Fertilizer in the early fall will help winter hardiness.

SUGGESTED SEEDING RATE

25lbs / Acre drilled and 35lbs/ Acre broadcast

CHARACTERISTICS

40%	Forage Tall Fescue
25%	Tetraploid Perennial Ryegrass
15%	Timothy
10%	Forage Kentucky bluegrass
10%	Tetraploid Annual Ryegrass
